

## Portable

Conveyors can be carried into position and set up in minutes. A foam filled core sandwiched between stainless steel plates means they are structurally strong and durable while remaining lightweight weighing only 168 lbs.

## Versatile

Conveyors allow for transport of packages where conventional handling methods cannot easily go. Unload or load a truck with a minimum number of workers. Move materials up a flight of stairs or through narrow doorways. Modular conveyors can be set up as temporary lines and changed as needed, or installed in a permanent position. Conveyors can be operated placed directly on the ground or on adjustable leg sections. Comes with a standard all grip belt. Guide rails can be added for oversized packages.

## Efficient

Save your workforce from unnecessary steps and heavy lifting by moving materials efficiently with conveyors. Handiveyors never tire, allowing more versatility for your workers to do other tasks.

Manufactured by:

## Unobstructed Surface

With the belt being the highest point, solid materials including packages of all sizes can run with no interference.

## Safe

Every part of the system has been designed with safety in mind. The control circuit is 24 AC and ensures proper electrical connections before starting equipment. A GFI on the power supply is recommended in potentially wet areas. The drive mechanism is contained within the frame offering no pinch points and the bottom belt edges are protected under guard.

## Power

Available in 120V, 220V single phase and 480V 3 phase power

# Adaptable for YOUR needs

Run flat on the ground, raised on legs, butted end to end or at an incline based on your job.

Optional Guide Rails available  
Adjustable from:

Standard all grip belt  
(Other options available)
